

Angular App Bootstrap Process

Banking App

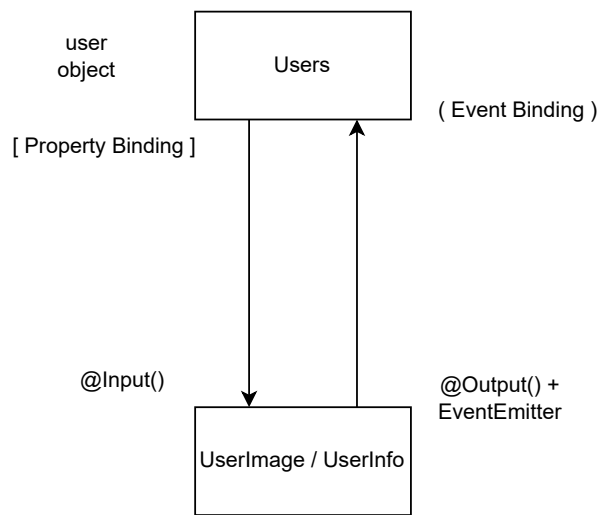

Data Binding Concepts

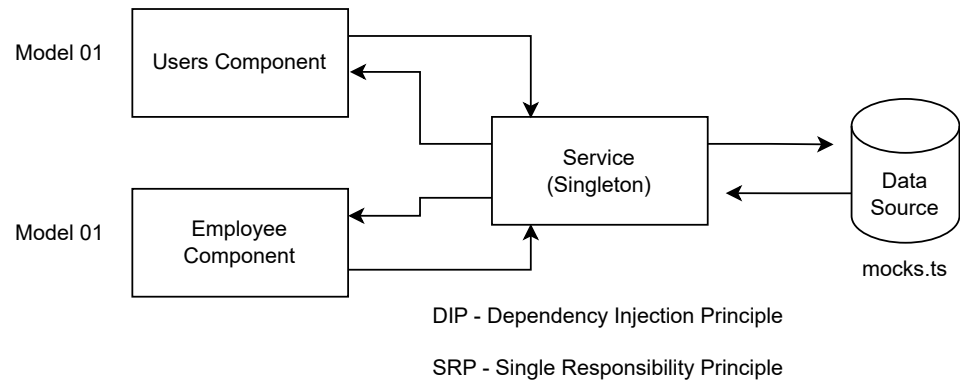

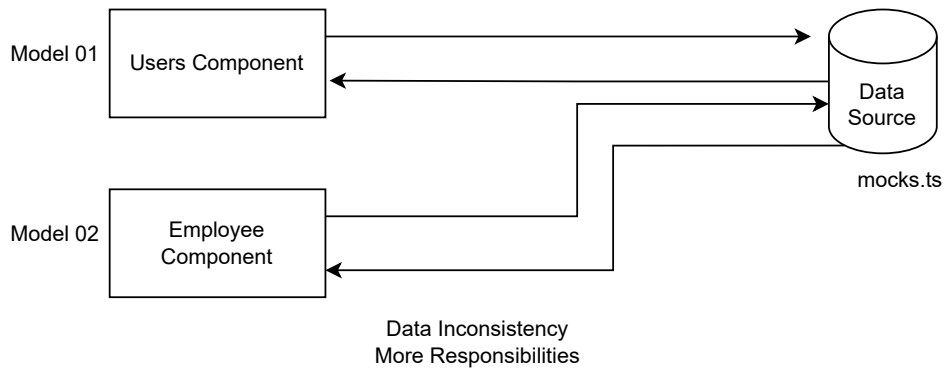

2 way data binding
- Banana in the box : `[ ( ngModel ) ]`
- `import FormsModule`

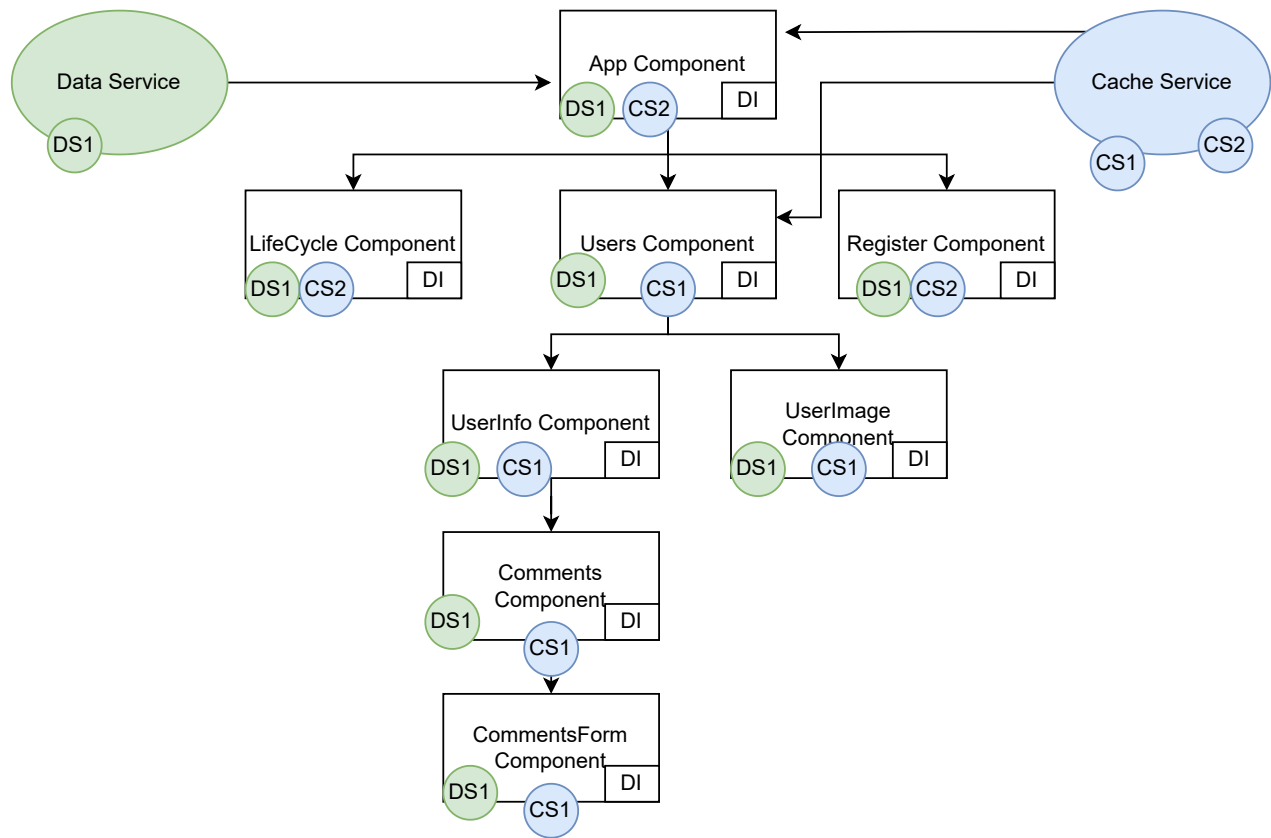

Nested Component Communication

Why Services?

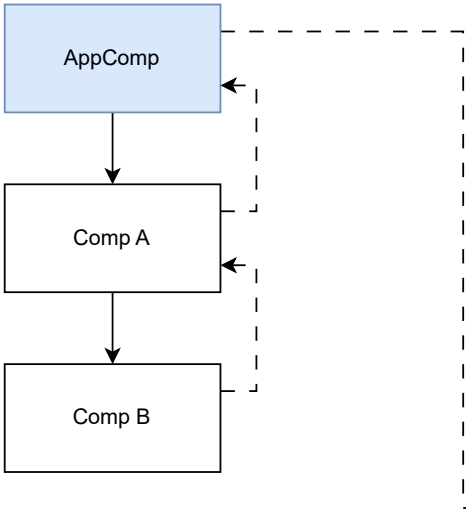

Dependency Injection Hierarchy

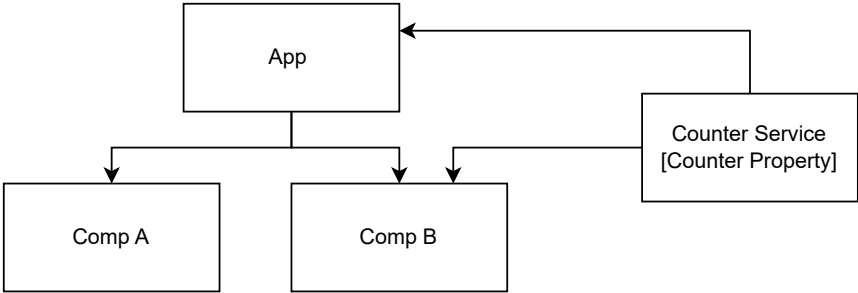

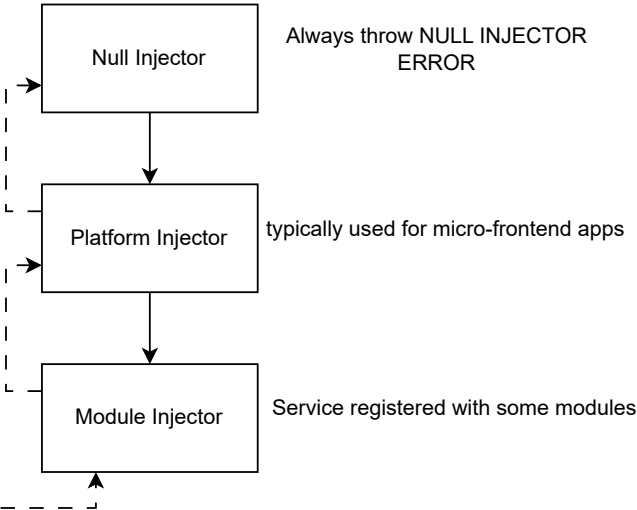

Dependency Injection Hierarchy Types

Element Level Injection

Module Level Injection

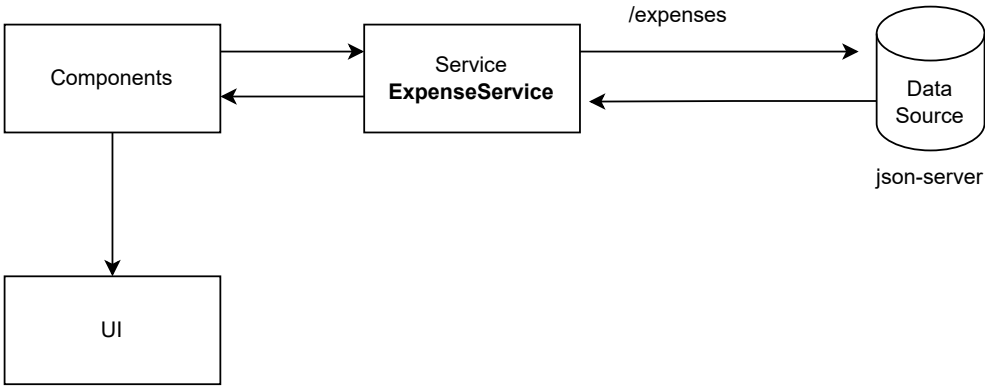

Dependency Injection Modifiers

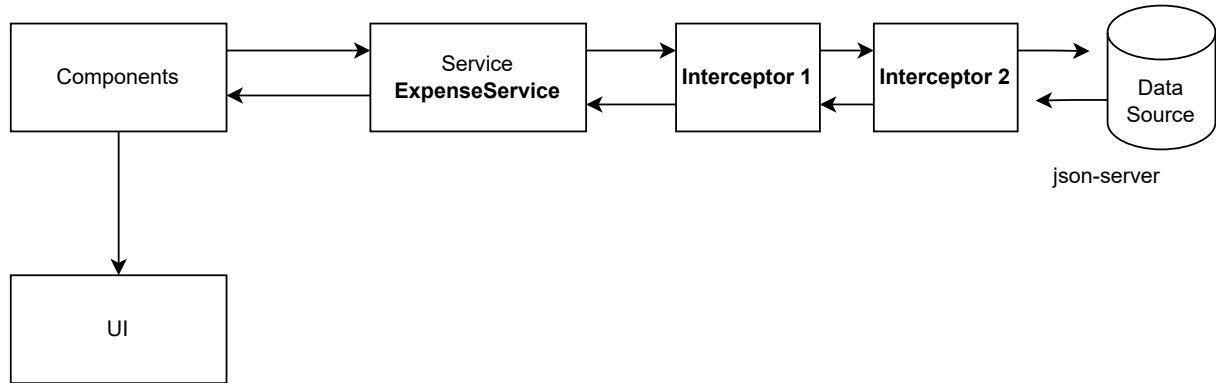

Modifiers : changes default DI behaviour

- `@Self()`: search only for current component. Don't look for any upward component/module
- `@SkipSelf()`: skips current component to search for service registration
- `@Host()`: search only self component as well as parent component. No further lookup needed.
- `@Optional()`: makes the service optional. Avoids Null Injector Error by making service as optional
